

# Giving You More Peace & More Quiet

Vac-Con® has always given More Power to You® but in doing so we've always strived for environmental responsibility. We've always cared about the planet just as much as we've cared about our customers. With this in mind we want you to be rest assured that you can have **Peace** of mind while you are out on the job site that your Vac-Con® machine is doing all it can to be environmentally friendly. We know that you want to take care of your customers with the highest satisfaction so we've added features to be **Quieter** so your customers are as undisturbed as possible. These are just some of the features of how Vac-Con gives More (**Green**) Power to You®:

- **Less Fuel is Consumed**—This is achieved by using large displacement (160CC) hydrostatic pumps, which provide more performance at slower speeds causing a reduction of the chassis operating speed. Figures show that fuel usage is reduced by 40%. With Vac-Con's® 2-engine design you don't need the chassis while using in water jet operations. Let's not forget: Less Fuel = Less Money Spent
- **Less Noise is Produced**—By reducing RPMs we also reduce the noise coming from the engine. This combined with our Silent Packages can even better improve the conditions for both the operator and the community. Also, with less exhaust being emitted into the atmosphere, we cut down on green house gasses and reduce the carbon footprint.
- **Less Water is Used**—Vac-Con uses high pressure, low volume water systems in applications where less water is able to do an effective job of cleaning. With the pressure doing the cleaning, the water volume can be reduced. This is a positive solution for the local community and the planet.
- **More Control to the Operator**—The Omnibus Operating System not only provides a simple, one-touch/one location system for the operator to have complete control of all of the machines functions. This control means the truck give you the power where you want it, it does what you want it to do and **WHEN** you want it to do it. This saves time and money. Your time and your money.

 **VAC-CON**  
MORE POWER TO YOU

A HOLDEN INDUSTRIES Company
